ABOUT US

We design and produce special units for applications in air conditioning, refrigeration and air handling systems, with low environmental impact and specifically designed to meet all specific clients' requirements in terms of size, capacity, performance and temperature. **Where the others stop, we go on.**

Our identity is founded on:

INNOVATION

We use the highest technology available in order to maximize efficiency, reduce start-up costs and guarantee a satisfactory return on investment.

CUSTOMIZATION

All types of machines can be provided and developed in non-standard version, thanks to the flexibility of our production system.

ECO-SUSTAINABILITY

We aim to develop applications with the lowest environmental impact possible, using refrigerants with a very low GWP, such as the HFO-1234ze and the R290.

Our facilities and sales offices around the world.

MAJOR PROJECTS

JLP AND WAITROSE, UK

John Lewis Partnership is the mother group of the most important companies dealing with retail sale in the UK: the supermarket chain Waitrose and John Lewis department stores. Geoclima designed and developed more than 20 projects and more than 40 units with HFO1234ze for JLP and Waitrose offices and supermarkets within the UK during the last years. Geoclima provided both Turbomiser and G-Range and V-Range air cooled units for these projects.

The use of HFO1234ze as refrigerant ensure great efficiency and at the same time very low environmental impact of the unit installed. With Turbomiser units and HFO1234ze the highest efficiency and the best performance are obtained.

For the Waitrose supermarket in Bromley, Geoclima developed in 2012 the world-first HFO chiller, awarded at National ACR Award 2012. Currently the largest Turbomiser unit with HFO is installed and running at QinetiQ and provides 2.4 MW of total cooling capacity.
