

Effective data accuracy

After completing your selection, you can download the final report and share the commercial offer for a specific unit model. Each report is saved in your personal archive, allowing you to consult past selections anytime.

Geoclima selection software provides multiple options to simulate real operating conditions accurately and identify the best solution for your plant.

GeoSelectool relies on a huge database that guarantees verified data and reliable simulations

GeoSelectool enables a complete simulation (energy, economic, and financial) to identify the most suitable solution.

Manage your projects easily

DEPARTMENT OF
INFORMATION
ENGINEERING
UNIVERSITY OF PADOVA

GeoSelectool was developed by Geoclima in collaboration with the **Department of Information Engineering at the University of Padua**.

With GeoSelectool, you can efficiently manage your projects: **plan** the building's energy demand, **select** the Geoclima unit that best meets your plant's specific requirements, **simulate** annual energy consumption, and **outline** a tailored financial plan for the system.

GeoSelectool is a web-based tool, so installation and upgrades are not required. This also eliminates compatibility issues.

Your personal archive is stored online, so you never risk to lose your files.

GeoSelectool is fully responsive, adapting to various devices and browser sizes.
